

CoEvolution

A Comprehensive Trustworthy Framework for Connected Machine Learning and Secure Interconnected AI Solutions

Work Package WP2

Dissemination, Exploitation, Sustainability

Deliverable D2.1

Communication, Dissemination and Exploitation Plan

<i>Project Acronym:</i>	CoEvolution
<i>Grant agreement No:</i>	101168560
<i>Funding Scheme:</i>	HORIZON Research and Innovation Actions
<i>Call:</i>	HORIZON-CL3-2023-CS-01
<i>Call Topic:</i>	HORIZON-CL3-2023-CS-01-03 - Security of robust AI systems
<i>Project Start:</i>	1 November 2024
<i>Project Duration:</i>	36 months
<i>Lead Participant:</i>	AEGIS

This project has received funding from the European Union's Horizon Europe Framework Programme (HORIZON) under Grant Agreement No. 101168560.

Deliverable Information

Deliverable Administrative Information	
Project Acronym:	CoEvolution
Project Number:	101168560
Deliverable Number:	D2.1
Deliverable Full Title:	Communication, Dissemination and Exploitation Plan
Deliverable Short Title:	Plan for Impact Delivery
Document Identifier:	CoEvolution-D21-PlanForImpactDelivery-submitted
Lead Participant:	AEGIS
Version:	v1.0
Due Date:	30/04/2025
Submission Date:	29/04/2025
Dissemination Level:	SEN
Deliverable Type:	Report
Lead Editor(s):	AEGIS
Author(s):	AEGIS
Reviewers:	ICCS, TID
Keywords:	Communication, Dissemination, Exploitation, Plan for impact
Status:	() draft, () final, (✓) submitted

Deliverable Revisions

Date	Version	List of Contributor(s)	Summary of Changes
07/03/2025	v0.1	AEGIS	ToC drafted, Input solicited
28/03/2025	v0.2	AEGIS	Initial input for every Section
04/04/2025	v0.3	AEGIS	Additional input for each Section. Sections 1 and 2 finalised
23/04/2025	v0.4	ICCS, TID	Draft, internally reviewed
25/04/2025	v0.5	AEGIS	Submitted the updated version to the reviewers, WPL, SPM, and PC, awaiting their approval
29/04/2025	v1.0	ICCS	Final editorial check and submit

Consortium

Executive Summary

The “Plan for Impact Delivery” of the CoEvolution project outlines a comprehensive strategy designed to ensure the successful realisation of the project’s objectives and its lasting impact. This deliverable sets the foundation for impactful engagement with key stakeholders and aims to establish a clear path for the project’s results to resonate within relevant communities and industries.

A key focus of this plan is Communication and Dissemination (C&D). The document provides a well-structured communication strategy with precise goals and targeted approaches. This strategy has been developed to effectively deliver the project’s outcomes to the appropriate audiences, using a diverse range of dissemination and communication tools and techniques. These include both digital and traditional channels, tailored to reach the various stakeholders relevant to CoEvolution.

The deliverable also integrates a robust monitoring and evaluation framework, essential to assess the success of dissemination activities. Key Performance Indicators (KPIs) have been established to track the effectiveness of outreach efforts, ensuring that the dissemination and communication strategy evolves according to the progress of the project. This monitoring approach allows for agile adjustments, guaranteeing that the CoEvolution project achieves its intended impact.

Furthermore, the document offers an early review of progress up to M6, providing a snapshot of key milestones reached and setting the stage for subsequent phases of the project.

In addition to the dissemination and communication strategy, the “Plan for Impact Delivery” also integrates an Exploitation Plan, which outlines the mechanisms through which the CoEvolution project’s results will be maximised for long-term impact.

The exploitation plan defines the key approaches and actions that will be undertaken to drive the uptake of CoEvolution’s results, including strategies for Intellectual Property (IP) management, commercialisation of outcomes, and fostering collaborations with external stakeholders. It also highlights the importance of sustainability, ensuring that the project’s outcomes continue to create value beyond its duration.

1 Introduction

1.1 Purpose and Scope of the Document

The “Plan for Impact Delivery” of the CoEvolution project is designed to strategically guide the effective communication, dissemination, and exploitation of the project’s outcomes. It outlines the strategic framework for delivering impactful results throughout the CoEvolution project. It defines the key actions, goals, and strategies for disseminating and exploiting the project’s findings, ensuring that they reach the appropriate audiences and contribute to the advancement of knowledge and practical solutions. By setting clear objectives and defining specific roles, it provides the structure for maximising the project’s influence and facilitating the uptake of its results.

The objectives of this document are the following:

- Defining a comprehensive communication and dissemination strategy that will guide the CoEvolution project’s activities and ensure alignment with its goals.
- Clarifying the roles and responsibilities of all partners involved in dissemination and exploitation to guarantee effective collaboration.
- Identifying suitable channels and tools to communicate results, using both digital platforms and traditional media to reach the target audiences.
- Establishing a methodology for monitoring and evaluating the impact of dissemination efforts, allowing for continuous improvement and ensuring the project’s success.
- Detailing exploitation pathways for the project’s outcomes, focusing on integrating results into commercial, policy, and further research initiatives.

Through the delivery of this document, the CoEvolution project aims to develop a comprehensive communication and dissemination strategy that will enable it to achieve its objectives and have a significant impact on the target audiences. By effectively engaging stakeholders and sharing its research findings, CoEvolution strives to contribute to the advancement of science and promote innovation in its field.

1.2 Relation to Work Packages, Deliverables and Activities

This deliverable is directly linked to the project’s activities and results. It is relevant across all Work Packages (WPs). WP3, WP4, WP5, and WP6 contribute content to be disseminated, generating the knowledge that the consortium aims to share with target audiences.

1.3 Structure of the Document

This document starts with an Introduction (Section 1) that outlines its purpose and scope, along with its connection to the project’s work packages and activities. The core strategy is described in Dissemination and Communication Strategy (Section 2), which sets out the main objectives, a roadmap to guide efforts across the project timeline, the roles and responsibilities of partners, and the identification of key target groups.

The Means & Activities to raise Awareness of CoEvolution (Section 3) presents the practical tools, channels, and planned actions that will be used to promote the project’s vision, progress,

and results. This is followed by the Monitoring - KPIs (Section 4), which introduces a set of indicators and measurement methods to assess the effectiveness of dissemination and communication efforts. The document also includes an initial Exploitation Plan (Section 5) that outlines how project results will be leveraged to create long-term impact and value. Finally, Conclusions (Section 6) summarises the key points and outlines the next steps to ensure the successful implementation of the outlined strategy.

2 Dissemination and Communication Strategy

2.1 Objectives

This strategy will outline how CoEvolution's results will be shared with the relevant stakeholders, ensuring timely communication through the most appropriate channels. The main objectives of the dissemination and communication strategy are as follows:

- Ensure that all partners understand the role of dissemination and communication in supporting the CoEvolution project's overall objectives.
- Establish a strong, recognisable project identity that will be consistently reflected in all communication materials. A professional toolkit, including promotional and informational materials, will be developed to support this.
- Raise awareness of the project's goals, progress, and outcomes among key stakeholders, including researchers, industry professionals, and policymakers.
- Increase the project's visibility within relevant communities and the broader public, thereby amplifying its impact and fostering greater recognition.
- Ensure the effective transfer of knowledge generated by the project, making it accessible, clear, and practical for the target audience to maximise its impact.
- Engage and foster collaboration among stakeholders by involving them in project activities, building support, and generating sustained interest.
- Concisely and clearly present the project's value proposition to ensure it is easily understood by both project partners and external stakeholders, particularly those not directly involved in the project.
- Plan and produce articles and scientific publications to disseminate project results at relevant conferences and through respected scientific journals, adhering to best practices for academic communication.

The CoEvolution dissemination and communication strategy should be designed to be flexible and adaptable to changes in the project's scope, objectives, and outcomes. This approach will ensure that the project remains relevant and impactful throughout its lifecycle. To achieve these objectives, a series of well-coordinated actions will be undertaken. These actions must be aligned with the progress of the project to ensure that they are timely and effective. To achieve an effective dissemination approach, the consortium has identified several principles that need to be considered:

- Accessibility, adaptability, and diversity of information: Dissemination activities will be continuously updated and tailored to meet the diverse needs of different audiences. This ensures that the information is accessible and engaging for a wide range of stakeholders.
- Relevance and clarity of the information: All information shared will be tailored to the specific needs and level of understanding of each user group, ensuring it is both relevant and comprehensible, maximising its impact.
- Engagement with end-users: Interacting with end-users and gathering feedback will be central to the dissemination and communication strategy. Understanding their needs and concerns will allow the project to ensure that its communication efforts are effectively aligned with user expectations and project achievements.

2.2 Dissemination & Communication Roadmap

To achieve the project objectives with regards to dissemination, the dissemination and communication strategy will adhere to the phases depicted in Figure 1.

Figure 1: Dissemination & Communication Strategy phases

Phase 1: Foundation Phase (M1 – M6)

During this initial phase, we focus on developing a comprehensive communication and dissemination strategy for the CoEvolution project. This phase is essential as it involves creating a structured roadmap that defines specific activities and actions to be implemented throughout the project's lifecycle. By establishing this foundation, we ensure a well-organised approach that effectively supports the project's objectives.

The communication and dissemination strategy outlines key elements such as project objectives, target audiences, core messages, preferred communication channels, and realistic time-lines. This detailed planning ensures that dissemination efforts are strategically aligned with the project's goals and effectively reach the intended stakeholders.

Once the strategy is finalised, we initiate the deployment of communication tools, including the launch of a dedicated project website, the creation of social media channels, and the development of outreach materials such as newsletters and social media content. These actions bring the strategy into operation, fostering engagement with the target audiences from the early

stages of the project.

By the end of M6, this phase will be successfully completed, with a solid communication and dissemination framework in place. The established roadmap will ensure that all activities are well-coordinated and contribute to achieving the project's impact objectives throughout its duration.

Table 1: Foundation Phase – Key D&C actions roadmap

Action	Timeline	Status
CoEvolution Website	M1	Completed (See coevolution-project.eu)
Set-up X Account	M2	Completed (See x.com/coevolution_eu)
Set-up LinkedIn Account	M2	Completed (See LinkedIn)
Set-up Facebook Account	M2	Completed (See Facebook)
Set-up YouTube Channel	M2	Completed (See YouTube)
Set-up Bluesky Account	M3	Completed (See Bluesky)
1st Press Release	M5	Completed
1st Introductory Video	M6	Completed
The first CoEvolution Newsletter	M6	In Progress
The current document D2.1	M6	Completed

Phase 2: Active Dissemination & Mid-term Assessment (M7 – M18)

During this phase, the focus shifts towards actively engaging stakeholders and expanding the reach of the CoEvolution project. With the communication and dissemination framework established, efforts are now directed at raising awareness, fostering dialogue, and ensuring that key messages resonate with the target audiences. A variety of dissemination activities will be deployed to effectively engage stakeholders, including targeted workshops, interactive webinars, industry events, and direct meetings. These initiatives will serve as essential platforms for sharing project insights, discussing key developments, and gathering valuable feedback from stakeholders. Additionally, scientific publications, blog posts, and social media campaigns will be leveraged to amplify the project's visibility.

This phase also includes the D2.2: First Impact Analysis (M18), which will provide an initial evaluation of the project's outreach effectiveness. Insights gathered from stakeholder engagement and dissemination activities will be assessed to refine the strategy, ensuring continuous improvement and alignment with project goals.

Table 2: Active Dissemination & Mid-term Assessment - Key D&C actions roadmap

Action	Timeline	Status
Workshop on technologies for autonomous driving	M7 - M12	Not Started
5th Workshop on Flexible Resource and Application Management on the Edge	M9	Not Started
1st Technical Workshop	M10 - M12	Not Started
1st InfoDay (Webinar)	M12	Not Started
1st Summer school	M12 - M18	Not Started
1st Online Training Tutorial	M14 - M18	Not Started
1st Industrial Panel	M14 - M18	Not Started
D2.2 First Impact Analysis	M18	Not Started

Phase 3: Knowledge Transfer & Impact Maximisation (M19 – M36)

In this phase, the primary goal is to actively promote the adoption and deployment of the tools, concepts, and methodologies developed by the CoEvolution project. Recognising the importance of these innovations, focused promotional activities will be carried out to effectively communicate their value and potential to the broader community.

By the 18-month milestone, the project will have generated concrete outcomes. This marks a crucial point where the dissemination and communication plan is updated. This updated plan will expand efforts to engage a wider audience, including potential users, industry stakeholders, and policy makers, while adapting strategies to address the evolving needs of the market. The revised communication and dissemination strategy will emphasise not only the promotion of CoEvolution's outcomes but also the support for their exploitation. By ensuring that the project's innovations are effectively disseminated and deployed, this phase aims to create a lasting impact that drives growth, fosters collaboration, and sustains innovation in the relevant fields.

Additionally, the D2.3: Final Impact Report (M36) will assess the project's success in achieving its dissemination goals and will provide a comprehensive overview of the outcomes, highlighting the long-term effects of CoEvolution's contributions.

Table 3: Knowledge Transfer & Impact Maximisation - Key D&C actions roadmap

Action	Timeline	Status
Standardisation Workshop	M19	Not Started
2nd InfoDay (Webinar)	M19 - M22	Not Started
1st Use Case workshop	M20 - M24	Not Started
2nd Technical Workshop	M20 - M26	Not Started
2nd Online Training Tutorial	M20 - M26	Not Started
2nd Summer School	M20 - M26	Not Started
2nd Industrial Panel	M20 - M26	Not Started
2nd Use Case workshop	M24 - M26	Not Started
3rd Online Training Tutorial	M26 - M30	Not Started
3rd Industrial Panel	M30 - M36	Not Started
D2.3 Final Impact Report	M36	Not Started

2.3 Roles & Responsibilities

To ensure the effective dissemination and communication of the CoEvolution project, all project partners will be actively involved in dissemination and communication efforts, collaborating to ensure the project's outcomes and achievements reach the relevant stakeholders and audiences. Each partner's contribution will be essential in maximising the project's impact, with roles tailored to their individual expertise, market position, and resources. Partners will leverage their strengths, networks, and industry connections to target specific audiences and ensure that CoEvolution's outcomes are communicated effectively and exploited efficiently. By drawing on their diverse capabilities, partners will enhance the reach and visibility of the project, ultimately fostering greater adoption of the innovations developed.

Table 4 outlines the specific roles and responsibilities of each partner, taking into consideration their geographic presence, industry influence, and area of expertise. This distribution of responsibilities will ensure that all partners are aligned with the project's objectives and are positioned

to contribute in the most effective way to the dissemination and communication strategy.

Table 4: Individual dissemination and communication plans

Partner	Role and responsibilities regarding dissemination and communication
ICCS	ICCS will play a pivotal role in advancing cutting-edge solutions for secure and resilient AI systems, with a strong focus on robustness and safeguarding AI integrity. As the project coordinator, ICCS will lead targeted dissemination efforts, ensuring the creation and distribution of high-quality, impactful materials. This includes dissemination of project results through scientific events including presentations in international conferences and peer-reviewed publications in high-impact proceedings and journals. Additionally, ICCS will leverage its official website and social media platforms to maximise outreach, sharing key project updates, insights, and research advancements with the broader scientific and industrial community.
ISI	ISI is an industry research institute, and has a major goal to produce high quality academic conference and journal papers. Also ISI collaborates with Greek Universities and intends to further promote the results of the project in academic courses, PhD studies and summer school presentations. In addition ISI is also the lead of T2.3 “Liaison with other EU-funded projects and initiatives” and intends to disseminate and communicates the results of the project with other EU projects and initiatives.
UNICA	UNICA will disseminate the research findings in top-tier journals (Q1) and conferences (A, A*) in the fields of Machine Learning and Security, ensuring broad visibility within the academic and industry communities. UNICA will engage with the general public, as well as the aforementioned communities, through its social media channels and the team’s website (saiferlab.ai), where project updates and results will be shared.
SIE	Siemens’s dissemination efforts will prioritise presenting CoEvolution’s research and results at academic conferences and publishing in peer-reviewed journals. This includes top-cybersecurity conferences such as S&P, Usenix, NDSS, etc. For non-academic audiences, SIEMENS will actively engage with relevant standardisation groups (e.g., CEN-CENELC, ETSI) to ensure project’s findings contribute to the development of industry standards and guidelines.
AEGIS	AEGIS, in its role as the Dissemination Manager, will lead all dissemination activities for the CoEvolution project, ensuring the creation and distribution of high-quality, impactful materials. By following the CoEvolution dissemination plan, AEGIS will use its network of stakeholders and its communication channels to maximise project visibility and engagement. This includes leveraging the AEGIS website, social media platforms, and blogs to share project updates, insights, and results.

TID	TID's dissemination efforts will focus on presenting CoEvolution's outcomes at top-tier academic conferences and in peer-reviewed journals, particularly in the areas of federated learning, decentralised peer-to-peer learning, evolutionary strategies, and cybersecurity. Internally, TID will organise dedicated training sessions to facilitate the familiarization and integration of project results within the organisation, supporting broader adoption and sustainability of the developed technologies. Additionally, TID will actively share key project updates, milestones, outcomes, and insights through official TID social media platforms, such as LinkedIn, to maximise visibility and engage effectively with stakeholders.
UNIPi	UNIPi will disseminate the research in top-tier journals (Q1-Q2) such as <i>Neurocomputing</i> and <i>Neural Networks</i> , and conferences (A*, A) such as ICML, ICLR, CVPR, ECML, IJCNN in the fields of Machine Learning. UNIPi will also engage with the general public through its social media channels and the team website.
SLC	SLC will contribute to the overall dissemination strategy of the project through two main approaches. Firstly, by actively supporting the consortium's publication efforts in relevant scientific conferences and peer-reviewed journals. Secondly, by promoting the project and its outcomes through SLC's participation in various external meetings and events, including industry-focused gatherings and meetings with public organisations. In addition, SLC will seek opportunities for keynote presentations and will leverage synergies with other projects it is involved in to further disseminate the results and insights of the project.
AVL	AVL's dissemination efforts will focus on industrial fairs and exhibitions (e.g., such as FISITA) and on European working groups (such as the automotive task force in BDVA and mobility topics group in ADRA). AVL will also contribute to scientific publications (e.g., the industrial track of the International Conference on Distributed and Event-based Systems).
AVI	AVISENSE's dissemination efforts will focus on showcasing the advancements and outcomes of the research in AI-driven collaborative perception. AVISENSE will prioritise presenting its findings at leading academic conferences and publishing in high-impact peer-reviewed journals. AVISENSE will lead targeted dissemination activities, ensuring the creation and distribution of high-quality, impactful materials. To enhance outreach, AVISENSE will utilise its official website, social media platforms, and industry blogs to share project updates, key insights, and research results.
DIE	DIE's dissemination strategy will highlight the practical benefits and performance of its tools and those developed by partners, through user evaluations and pilot testing. These activities will be documented and shared through presentations, targeted publications, workshops, and case studies. DIE will also actively showcase the project's achievements through its company's social media channels (X, LinkedIn).

CBRL	As the leader of Task 2.2, CBRL will collaborate with standardisation bodies to ensure CoEvolution's results influence the development of future standards. CBRL will also drive targeted dissemination activities, ensuring the creation and distribution of high-quality materials. To maximise outreach, CBRL will leverage its official website, social media platforms and industry blogs. Moreover, CBRL will promote the adoption of secure AI practices and coordinate business opportunities with technical progress as the leader of WP2.
STS	As part of its dissemination activities, STS plan to collaborate with partners on producing joint research, aiming in publications that showcase the scientific contributions and real-world impact of the project. These publications will focus on AI and security and will be supported by findings from evaluations, pilot deployments, and technical use cases developed within the CoEvolution framework. Furthermore STS will actively engage with the public by sharing project updates, milestones, and results through its official social media platforms, such as LinkedIn to ensure wide visibility and community involvement.

2.4 Target Groups

A tailored dissemination and communication strategy for each target group is essential to effectively reach and engage with the relevant stakeholders. Below is a plan for each identified target group based on the specific needs and interests they hold in the context of Artificial Intelligence (AI) and security.

1. AI Researchers and Developers

- Objective: Provide tools and frameworks to build secure, robust, and trustworthy AI systems.
- Communication Channels: Webinars, academic journals, and research conferences.
- Tailored Messaging: Highlight CoEvolution's role in improving adversarial robustness and security in AI models.
- Engagement Activities: Organise research-focused workshops, collaborate on academic papers, and provide resources on AI security frameworks.

2. Security Professionals and Researchers

- Objective: Enhance security-by-design and resilience against adversarial attacks in AI systems.
- Communication Channels: Specialised cybersecurity events, online forums, and industry seminars.
- Tailored Messaging: Stress CoEvolution's contribution to securing AI-based systems in network security.
- Engagement Activities: Host training sessions, develop case studies on adversarial defense, and engage in collaborative research projects.

3. Government and Regulatory Bodies

- Objective: Support the establishment of standards for evaluating AI-based security systems.
- Communication Channels: Policy roundtables, regulatory webinars, and reports.
- Tailored Messaging: Emphasise the importance of adversarial robustness in AI regulations and security standards.
- Engagement Activities: Provide policy briefs, contribute to AI regulation discussions, and consult on the integration of security standards in AI systems.

4. Technology Companies

- Objective: Assist companies in securing their AI supply chains and ensuring data integrity.
- Communication Channels: Industry conferences, business roundtables, and newsletters.
- Tailored Messaging: Demonstrate how CoEvolution's framework ensures secure, interoperable, and trustworthy AI solutions.
- Engagement Activities: Offer consultations on AI security, conduct targeted demonstrations, and collaborate on joint projects.

5. Software and Hardware Vendors

- Objective: Address the need for secure and resilient technologies in AI hardware and software.
- Communication Channels: Product webinars, technical demonstrations, and trade shows.
- Tailored Messaging: Showcase how CoEvolution's solutions enhance the security and resilience of AI-based hardware and software.
- Engagement Activities: Organise technical workshops for vendors, provide use cases for secure hardware, and facilitate collaboration on resilient solutions.

6. Industry and Business Leaders

- Objective: Demonstrate the value of context-aware, resilient AI systems for businesses.
- Communication Channels: Business forums, CEO roundtables, and industry newsletters.
- Tailored Messaging: Highlight how CoEvolution's approach ensures more robust and resilient AI applications for businesses.
- Engagement Activities: Collaborate with industries, host roundtable discussions with technical managers, deliver tailored presentations, and provide industry-specific case studies.

7. End Users of AI Systems and General Public

- Objective: Raise awareness of AI systems' security and trustworthiness.
- Communication Channels: Public webinars, blogs, social media, and user-friendly reports.
- Tailored Messaging: Emphasise CoEvolution's role in ensuring AI systems is safe, ethical, and reliable for everyday users.
- Engagement Activities: Conduct public awareness campaigns, provide easy-to-understand guides, and create interactive tools to demonstrate AI security.

8. Policy Makers

- Objective: Support the development of AI governance frameworks and security standards.
- Communication Channels: Policy briefings and European forums.
- Tailored Messaging: Advocate for AI security and ethical guidelines, referencing CoEvolution's impact on trustworthy AI.
- Engagement Activities: Provide insights through policy papers, participate in regulatory consultations, and collaborate on policy development.

To ensure the continuous improvement and effectiveness of the tailored communication strategies outlined above, a robust evaluation and optimisation framework is essential.

- **Feedback Mechanisms**: Implement feedback mechanisms to solicit input from stakeholders and evaluate the effectiveness of communication strategies, adjusting approaches as needed to optimise engagement and impact.
- **Metrics and Performance Indicators**: Define KPIs and metrics to track progress towards engagement goals and measure the impact of communication efforts across different stakeholder groups.

3 Means & Activities to raise Awareness of CoEvolution

3.1 Dissemination & Communication Toolkit

3.1.1 Web Presence and Digital Material

Project Logo

The CoEvolution logo features a modern and technology-driven design that reflects its focus on connected machine learning and secure AI solutions.

Figure 2: The CoEvolution Logo

Key Elements of the Logo:

- **Typography:**
 - The logo prominently displays "CoEvolution" in bold, dark blue sans-serif font, giving it a clean and professional look.
 - The "C" and "E" are stylised in uppercase letters, forming a unique, interconnected symbol.
- **Symbolism in the "CE" Design:**
 - The "C" is encased in a digital circuit-like structure, composed of interconnected nodes and lines, representing machine learning, AI, and interconnected networks.
 - The "E" extends seamlessly from the "C," suggesting continuous evolution, connectivity, and the integration of AI systems.
- **Color Scheme:**
 - The primary color is a deep navy blue, symbolising trust, security, and professionalism.
 - The secondary color is a lighter blue used in the circuit design, emphasising the tech-driven nature of the project.

- **Overall Message:**

- The logo conveys a sense of innovation, security, and connectivity, aligning with CoEvolution's mission to develop a trustworthy framework for interconnected AI solutions.

Project Website

The CoEvolution website will be an essential tool for promoting the project and fostering communication between all project entities. As such, it will be referenced in all public documents and presentations related to CoEvolution. The website will feature an intuitive, user-friendly design, ensuring easy access for all stakeholders. Its main purpose is to effectively disseminate project-related information in a timely manner, and it will be regularly updated with the latest dissemination materials throughout the project.

The website's primary function will be to disseminate up-to-date information about the project's progress in an efficient and timely manner. This includes publishing key dissemination materials, which will be continuously updated throughout the project's lifecycle. As a centralised hub for all CoEvolution-related information, the website will provide comprehensive details about the project's scope, objectives, consortium members, and deliverables. It will also feature updates on ongoing activities and achieved milestones, offering valuable insights to stakeholders, including project partners, funders, and the wider community.

In addition, the website will serve as a platform for stakeholders to stay informed on the project's developments. This ensures transparency and encourages collaboration among all parties. The website will also include features for direct communication, allowing visitors to contact project representatives for inquiries, feedback, and engagement. These interactive elements foster an open dialogue, ensuring that stakeholders remain actively engaged and well-informed throughout the project.

The CoEvolution website was designed and developed by AEGIS, with development activities beginning in M1 (November 2024). By the beginning of M2 (December 2024), the website was fully operational and ready for use.

CoEvolution Website Structure:

Figure 3: CoEvolution Website Structure Diagram

The project's website consists of a public domain where visitors can access information related to the project and download any dissemination material that is publicly available, such as accepted deliverables, brochures and other informative documents or publications.

The first version of the CoEvolution website has been released with a user-friendly design that makes it easy for visitors to navigate and access all the key information at the homepage. The website menu has representative titles that assure easy navigation.

CoEvolution's website provides an overview of the WPs and the deliverables to ensure that the visitors stay informed about the project's progress. Additionally, a Newsletter service and Social Media accounts have been created to provide the user with easy access to the project's proceedings and to remind them on a regular basis at the frequency they prefer. Moreover, a dissemination material repository has been created for the visitors to access relevant materials related to the project. Furthermore, the website provides the ability to share any news, blogs or relevant content from the website on social media platforms.

Overall, the CoEvolution website aims to provide a comprehensive and interactive platform that caters to the needs of all visitors.

Figure 4: CoEvolution's Website

Social Media Accounts

The CoEvolution project recognises the significant role that social media plays in amplifying communication efforts and enhancing the visibility of the project. To engage a diverse range

of stakeholders and reach a broader audience, CoEvolution will leverage various social media platforms to distribute tailored content, considering the unique audience demographics of each channel. The project will maintain an active presence across multiple social media networks, as outlined in Table 5, with all project partners contributing to ensure consistent and impactful social media engagement.

By using social media, the CoEvolution team will be able to engage directly with the wider community, stakeholders, and other organisations. Regular interaction with the audience will foster stronger relationships and keep the project at the forefront of relevant discussions. The project's social media channels will be used to share a wide range of updates, including key project milestones, publications, deliverables, research findings, software releases, blog posts, press releases, and other newsworthy developments. This active and sustained presence will help to solidify CoEvolution's online presence and ensure that the project remains visible and top-of-mind for stakeholders and the broader public.

In addition to promoting the project's achievements, social media will serve as an effective tool for raising awareness about the project's objectives, innovations, and impact, particularly in areas related to context awareness, AI security, and resilience. By maintaining consistent engagement and sharing relevant content, CoEvolution will strengthen its outreach efforts and foster an ongoing dialogue with its target audiences.

Table 5: CoEvolution Social media accounts

YouTube	https://www.youtube.com/@CoEvolutionEUH2020

X: In December 2024, the CoEvolution project launched its X account (Figure 5) as a key component of its online communication strategy. X has traditionally been a valuable platform for real-time engagement, enabling direct interaction with researchers, industry professionals, and the public. The project has used X to share updates, key achievements, research findings, and event participation, while also engaging in discussions on AI security, resilience, and context awareness.

However, recently, X has introduced several changes that have made it increasingly challenging for projects to effectively manage outreach. The removal of free analytics tools, restrictions on content visibility, and growing platform instability have made it harder to track engagement and optimise communication strategies. While the CoEvolution project will continue to use X to maintain visibility, these limitations have led to the decision to expand onto alternative platforms, ensuring a more robust and sustainable social media presence.

Figure 5: CoEvolution X account Screenshot

LinkedIn: Originally created as a profile, CoEvolution transitioned to an official LinkedIn page to provide a more structured and professional presence. LinkedIn serves as a key platform for engaging with researchers, industry professionals, and policymakers, making it an essential tool for disseminating in-depth project updates, publications, and event announcements.

The CoEvolution LinkedIn page (Figure 6) will feature research highlights, participation in conferences, collaboration opportunities, and discussions on key project themes such as AI security and resilience. By maintaining an active presence, CoEvolution will foster connections with experts, establish thought leadership, and contribute to the broader discourse on emerging AI challenges.

Figure 6: CoEvolution LinkedIn account Screenshot

Facebook: Similar to LinkedIn, the CoEvolution project initially launched a Facebook profile but later transitioned to a dedicated project page to enhance visibility and engagement. Facebook provides an accessible and interactive space for reaching a wider audience, including students, researchers, and the general public.

The project's Facebook page (Figure 7) will be used to share major updates, multimedia content, event announcements, and outreach activities in a way that encourages audience interaction. By leveraging Facebook's community-oriented features, CoEvolution aims to build a more

engaged online following, fostering discussions on AI security and resilience while broadening its outreach beyond technical audiences.

Figure 7: CoEvolution Facebook account Screenshot

Bluesky: Recognising the growing challenges on X, the CoEvolution project established a presence on Bluesky in March 2025 as part of its strategy to diversify its online engagement. Bluesky's decentralised approach offers a more open and stable environment for meaningful discussions, particularly within communities focused on digital security, AI, and privacy-preserving technologies.

By joining Bluesky (Figure 8), CoEvolution aims to engage with forward-thinking researchers, developers, and industry experts exploring decentralised and federated online ecosystems. The platform will be used to share research insights, project developments, and event announcements while fostering discussions on AI security and resilience. This expansion ensures that CoEvolution remains at the forefront of relevant conversations, even as social media landscapes evolve.

Figure 8: CoEvolution Bluesky account Screenshot

YouTube: As a key visual communication tool, YouTube will play an important role in CoEvolution's dissemination strategy. The project's YouTube channel will host video content, including recorded presentations, expert interviews, technology demonstrations, and insights into key research findings.

YouTube (Figure 9) provides an effective way to present complex topics in an engaging and accessible format, reaching both technical and non-technical audiences. By consistently updating the channel with high-quality content, CoEvolution aims to enhance its impact, ensuring that its innovations and results are effectively communicated to stakeholders worldwide.

Figure 9: CoEvolution YouTube account Screenshot

Newsletters

The CoEvolution project has implemented effective strategies to maintain timely communication and engagement with stakeholders through a dedicated news channel on the project's website. This platform serves as a reliable source of regular updates on the project's activities and progress. To offer a comprehensive overview, two newsletters will be released per year. It will contain valuable information about significant events, the latest project news, progress updates, and notable outcomes.

CoEvolution newsletters aim to provide the audience with detailed information about upcoming tasks and events, enabling them to actively participate and stay connected with the project and its associated initiatives. The goal is to inform the audience on how they can actively engage with the project and associated initiatives. In order to maintain the reliability of our content, the CoEvolution partners actively contribute by providing accurate information. In line with data protection regulations such as General Data Protection Regulation (GDPR), newsletters are only sent to those who specifically gave consent to receive them. This is done on the CoEvolution website (Figure 10) by subscribing to the newsletters in the newsletter-dedicated area.

Figure 10: CoEvolution Newsletter Screenshot

Press Releases

The CoEvolution project will issue several press releases at key milestones to highlight significant achievements and developments. According to our dissemination plan, a total of ten press releases will be published throughout the project. These press releases will be widely circulated by all partners through their business networks and media contacts, ensuring broad visibility. Additionally, they will be published on the project website and shared across social media channels to maximise outreach.

The first press release, issued on M6 of the project (Figure 11), announced the official launch of CoEvolution and introduced its objectives and vision to the public.

1st Press Release

CoEvolution: A New Horizon Project for AI Security, Trust, and Risk Assessment in Machine Learning

The consortium of **CoEvolution - A Comprehensive Trustworthy Framework For Connected Machine Learning And Secure Interconnected AI Solutions** - is proud to announce the official start of this European initiative, funded by the European Commission under the Horizon Europe research and innovation programme.

CoEvolution will create an end-to-end Security, Trust, and Robustness (STR) assessment solution, generating context-aware AI models characterized by their **AI Model Bill of Materials (AIMBOM)**. The goal is a universal hub providing a coherent **STR risk assessment** and security assurance flow, aligning with **MLDevOps** and **EU AI regulatory frameworks**. The paradigm includes novel AI model descriptions, AIMBOM management, security monitoring, and context awareness. CoEvolution introduces a new STR paradigm based on Bills of Materials, offering a unified approach to **describing AI models in supply chains**, ensuring STR compliance with EU directives on trust, fairness, data governance, and **GDPR guidelines**. Open-source trusted datasets and CoEvolution developed AI models enhance the hub's capabilities, aiming for a robust, adaptable risk analysis and security assessment framework aligned with evolving AI cybersecurity threats.

Funded by
the European Union

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Commission. Neither the European Union nor the granting authority can be held responsible for them.

Figure 11: CoEvolution 1st Press Release

Blog Articles

As part of the CoEvolution project, the partners are actively engaged in sharing their insights and expertise through dedicated blog posts. These blog posts serve as a valuable platform for the partners to contribute their knowledge and perspectives on various aspects of the project. By preparing and publishing these blog posts, the partners aim to provide in-depth analysis, highlight key findings, and share best practices with a wider audience. These contributions from the project partners not only enrich the overall content but also foster collaboration and knowledge exchange within the project and beyond. The blog posts (Figure 12) will be regularly updated to ensure the audience remains informed about the latest developments and can

benefit from the diverse perspectives of the CoEvolution partners.

Figure 12: Blog Articles Page Screenshot

3.1.2 Printable Material

Since the launch of the CoEvolution project, we have been actively working on the development of dissemination materials to enhance visibility, engage stakeholders, and effectively communicate the project's objectives. While these materials are still in progress, they will soon be finalised and shared through multiple channels to maximise outreach.

The initial set of printable materials, including a project flyer, a roll-up banner, and a poster, is currently being designed. The flyer will provide a concise and visually engaging introduction to the project, the roll-up banner will serve as a key promotional asset for events and exhibitions, and the poster will present essential project details in an eye-catching format suitable for various dissemination activities.

Once finalised, these materials will be accessible in digital format on the project website, ensuring broad and easy dissemination. Additional materials will be developed as the project

progresses, further strengthening our communication efforts.

3.2 Planned Dissemination & Communication Activities

3.2.1 Publications

The dissemination of research findings through scientific publications is a key strategy for engaging the academic and research communities while establishing the significance of the CoEvolution project. Publishing in conferences, journals, and magazines ensures that the project's innovations gain visibility among experts, fostering knowledge exchange and collaboration.

CoEvolution aims to share its findings through high-impact scientific journals and conferences, serving multiple objectives. Firstly, these publications will increase awareness of the project's outcomes within the research community, broadening its reach and recognition. Secondly, the peer review process will provide valuable scientific feedback, contributing to the refinement and validation of the project's methodologies and results. Lastly, by featuring in reputable scientific outlets, CoEvolution will reinforce its credibility, strengthening stakeholder confidence in its contributions.

Through a proactive publication strategy, CoEvolution is committed to advancing scientific knowledge, stimulating dialogue within the research community, and ensuring that its findings have a lasting impact. Table 6 provides an overview of the targeted scientific publications that the project aims to pursue.

3.2.2 Events

Events organised by the consortium

CoEvolution is committed to organising a diverse range of events to effectively disseminate the project's progress, foster collaboration, and maximise stakeholder engagement. These events will align with the project's objectives and provide key stakeholders with valuable insights into CoEvolution's advancements and outcomes.

Specifically, CoEvolution will organise:

- 2 Use Case Workshops to engage stakeholders and demonstrate real-world applications of the project's solutions.
- 2 Technical Workshops to present and discuss the project's technical innovations with experts and researchers.
- Online Training Tutorials to provide hands-on guidance and practical knowledge to interested audiences.
- 2 Summer Schools to educate and train early-career researchers and professionals in relevant domains.
- 3 Webinars to disseminate project updates and key findings to a broader audience.
- 3 Industrial Panels to facilitate discussions with industry leaders on the adoption and impact of CoEvolution technologies.

These events will serve as key dissemination and engagement opportunities, ensuring that project results reach the relevant communities, fostering knowledge exchange, and encouraging the adoption of CoEvolution's innovations.

Events organised by the partners of the consortium

As part of our ongoing efforts to disseminate the CoEvolution project's advancements and foster collaboration, several events are already planned by the partners. These include the **5th Workshop on Flexible Resource and Application Management on the Edge** (M9) co-organised by ICCS, the **Workshop on Technologies for Autonomous Driving** as part of the **2025 IEEE International Smart Cities Conference** (M6-M12), organised by ISI and AVI, and the **Standardisation Workshop** (M18-M19), which could be a joint event where key insights and lessons learned from the standardization journeys of various projects will be exchanged, organised by CBRL.

However, as we are currently in M6 of the project, the full list of events is still under development, and additional workshops and dissemination activities will be planned as the project progresses.

3.3 Funding Information

In strict adherence to the guidelines provided by the European Commission (EC), it is mandatory that all communication materials and dissemination of results should demonstrate the visibility of European Union (EU) funding, by displaying the EU emblem (Figure 13) and including the following text:

“Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Commission. Neither the European Union nor the granting authority can be held responsible for them.”

Figure 13: Funded by the EU Logo

3.4 Collaboration with other Projects and Initiatives

CoEvolution plans to have a major impact on the security and trust of AI models. Given the fact that AI are in effect ubiquitous both in industry and academia, it is important to promote and disseminate the project's concepts and the AI Model Bill of Materials (AIMBOM) framework to relevant stakeholders, and also to gather input and feedback from other relevant research activities.

To this end, the CoEvolution project includes a specific task on collaborating with other EU projects and initiatives to identify opportunities for mutual learning and knowledge exchange. The ultimate goal is to identify potential areas for collaboration, and develop joint activities or outcomes, such as attending relevant meetings and events, conducting joint research, sharing project updates, and establishing connections with project leaders and stakeholders.

We have developed a long-term plan —subject to updates as needed— outlining our approach to collaboration activities. This plan includes an ongoing process of identifying related projects through a registry, which will serve as a living document, regularly updated and shared with members of the CoEvolution consortium. The remainder of the plan outlines the following activities along with their corresponding timelines:

- **M12:** At the end of M12, the CoEvolution project will have a well-defined architecture and focus and will be able to engage with other EU projects and initiatives, to initiate discussion and share newsletters.
- **M12-M18:** During this time period, we intend to schedule presentations of the CoEvolution project to other projects meetings and general assemblies that accept our invitations.
- **M12-M24:** During this period, we intend to create a cluster of various interested projects and participate in EU events as a group.
- **M18-M24:** After the half point of the project, we intend to organise at least one online or one day in-person workshop between the interested projects to gauge interest in conducting conjoined work and discuss potential shared work items.

- **M24-M30:** Having a solid foundation of the CoEvolution work items, we intend to organise at least one hackathon or workshop in the final year of the project to engage interested projects in developing collaborative work and producing common results.
- **M36:** Finally, we will report the outcomes and results of all the liaison work.

As of now, the following projects have been identified:

Table 7: Potential projects for collaboration

#	Project/Initiative	Type	Project Web Page
1	Guard AI	EU Project	guardai
2	EMERGE	EU Project	eic-emerge.eu
3	FAIR Lifelong Learning Transversal Project	Next-Gen EU Project	fondazione-fair.it/transversal-projects
4	MEDIATE	EU Project	mediate-horizon.eu
5	CyberSecDome	EU Project	cybersecdome.eu
6	Pandora	EU Project	pandora-heu.eu
7	dAIEdge	EU Project	daiedge.eu
8	Avalanche	EU Project	avalancheproject.eu
9	cPAID	EU Project	cpaid.eu
10	Sec4AI4Sec	EU Project	sec4ai4sec-project.eu
11	TURING	EU Project	–
12	ELSA	EU Project	elsa-ai.eu

4 Monitoring - KPIs

4.1 Key Performance Indicators

Effective monitoring of KPIs is essential for evaluating the execution of CoEvolution's dissemination and communication strategy. Tracking these KPIs provides valuable insights into the project's impact, highlights areas for improvement, and ensures that dissemination efforts align with strategic objectives.

To enable a comprehensive assessment, a set of KPIs has been established, covering various aspects of communication and outreach throughout the project's duration. These indicators will serve as a benchmark for measuring the effectiveness of CoEvolution's dissemination activities, helping to refine strategies and maximise engagement with target audiences. Table 8 below outlines the KPIs along with their corresponding target values, specifically designed to assess the success of CoEvolution's dissemination and communication plan.

Table 8: CoEvolution D&C KPIs and current status

KPIs	Description	Status M6
Scientific Publications KPIs		
KPI 1	Scientific papers in peer-reviewed Journals: ≥ 10	0
KPI 2	Presentations in Scientific Conferences ≥ 20	0
Technical Publications & White Papers KPIs		
KPI 3	Published Technical articles: ≥ 10	0
KPI 4	White papers/factsheets: ≥ 10	0
Source Code Repository KPIs		
KPI 5	Public Deliverables: 10	1
KPI 6	Open-source code: Publish to 2 repositories (e.g., GitHub, GitLab)	1
Push results to Communities, fora, alliances, and associations KPIs		
KPI 7	High-impact communities/associations where to push Co-Evolution results: >15	0
Showcases KPIs		
KPI 8	Showcasing events: ≥ 4	0
KPI 9	Different Countries Involved: ≥ 4	0
KPI 10	Participants: > 400	0
Workshops, webinars, and trainings KPIs (organised by the project)		
KPI 11	Use Case Workshops: 2	0
KPI 12	Technical Workshops: 2	0
KPI 13	Average number of attendees per workshop: > 50	0
KPI 14	Online Training Tutorials: 3	0
KPI 15	Summer schools: 2	0
KPI 16	Webinars: 3	0
KPI 17	Industrial panels: 3	1
KPI 18	Enrolled users: > 500	0
Industrial exhibitions, Trade Fairs KPIs		
KPI 19	Industrial exhibitions targeted: ≥ 10	0
KPI 20	Roll-up banners: 2	0
KPI 21	Brochures to stakeholders: >1000	0

Standardisation KPIs		
KPI 22	Number of standardization contributions to different SDOs: ≥ 4	0
Project Website KPIs		
KPI 23	Online by: M01	✓
KPI 24	Visitors at M36: > 10000	654
Social Media KPIs		
KPI 25	Social media followers (by M36): > 2000	153
KPI 26	No. of impressions (monthly average): > 500 (we can only count LinkedIn)	2072
e-Newsletters and Email Campaigns KPIs		
KPI 27	e-Newsletters contributed/released: > 6	0
KPI 28	Total Mailing List Contact Points: > 1000	15
Online Publishing KPIs		
KPI 29	Press releases: ≥ 10	1
KPI 30	Events organised by local authorities: ≥ 3	0
KPI 31	People per event: > 50	0
Links and liaisons KPIs		
KPI 32	Number of DIH and clusters to contribute: 10	0
KPI 33	Liaisons with other relevant projects: ≥ 5	0
Promotional material KPIs		
KPI 34	No. of hard copies (i.e., brochures, flyers, posters, etc.) distributed: > 2000	0
KPI 35	Roll-up Banners: > 4	0
Multimedia KPIs		
KPI 36	Number of promotional videos: > 3	1
KPI 37	Number of interviews produced: > 6	0
KPI 38	Views: > 3000	0
Public Talks KPIs		
KPI 39	Public events at universities: ≥ 6	0
KPI 40	Students per event: >100	0
KPI 41	Open days: ≥ 6	0
KPI 42	Visitors/open day: > 50	0

4.2 Means to Measure Progress

To effectively monitor the KPIs, a set of evaluation tools and methods will be utilised to assess the impact of dissemination and communication efforts:

- **Website Analytics:** Using Piwik (or an equivalent analytics tool) to track website traffic, visitor engagement, and user interactions.
- **Social Media Metrics:** Monitoring audience growth, reach, and engagement across various social media platforms to gauge the effectiveness of online outreach.
- **Communication Reporting System:**
 - Project partners will document their dissemination and communication activities in a centralised reporting file, accessible in the CoEvolution consortium SharePoint.

- Partners are encouraged to maintain records of their dissemination efforts, including presentation materials, photos, and social media posts, to ensure comprehensive tracking and reporting.

These tools will support a structured and data-driven evaluation of CoEvolution's outreach efforts, enabling continuous improvement and alignment with project objectives.

5 Exploitation Plan

The long-term impact of CoEvolution depends critically on the sustainability and uptake of its outputs beyond the project's lifetime. In accordance with the project's Description of Action (DoA), this task is dedicated to ensuring that the CoEvolution framework and its associated results can be commercially and practically exploited by relevant stakeholders. To this end, the activities outlined in this section aim to: a) investigate the **market landscape**, b) define suitable **exploitation routes** and c) develop a comprehensive **business plan** to support sustainable adoption (as reflected in the structure of this chapter).

It is important to note that this task has not yet been formally started. The implementation of the described activities will commence in M8 of the project. Therefore, the current chapter serves as a high-level plan for the upcoming activities. This plan will be progressively refined based on project developments and stakeholder engagement. In particular, the activities under this task will be closely aligned with the outcomes of Task 3.2 (Use-Case Specifications and Requirement), which focuses on the collection of industrial requirements. Industrial needs and expectations will directly influence the profiling of project outputs for exploitation.

5.1 Multi-Stakeholder Market Analysis

The first critical activity will focus on ensuring that the CoEvolution framework aligns with real-world market demands, both in the short term and with a forward-looking perspective extending up to five years after project completion. The following activities will form the basis of this action:

1. **Short-term and 5-Year Projections:** Analysis of verified customer needs and emerging market trends, rather than a sole focus on technological features:
 - Scenario planning exercises will be used to map plausible futures based on technological, political, and economic trends.
 - Interview relevant customers, industry representatives, and policymakers to validate market assumptions.
 - Facilitate cross-sector expert discussions to gather diverse perspectives on potential adoption barriers and drivers.
2. **Assessment of Total Operational Costs:** Development of a comprehensive Total Cost of Ownership (TCO) model that reflects not only acquisition but day-to-day operation, maintenance and scaling costs:
 - Model the cost elements associated with running the CoEvolution framework.
 - Benchmark these costs against alternative or competing solutions to highlight comparative advantages and limitations.
3. **Validation of Business Relevance:** Conduct real-world use case testing to ensure feasibility for daily operational use.
 - Select two to three realistic user scenarios for simulation.
 - Validate performance and operational assumptions with real users and internal technical teams.

- Identify “must-have” versus “nice-to-have” features from the perspective of business and operational users.

This sub-task will deliver a consolidated **market analysis report** to guide further exploitation planning.

5.2 Exploitation Strategy

The second pillar of this work focuses on the systematic documentation and development of the exploitation strategy for CoEvolution results. The scope of the key relevant activities includes the following:

1. **Documentation of Exploitation Activities:** Continuous collection and analysis of partner-led activities related to exploitation throughout the project duration.
2. **Development of Licensing Strategy:** Alignment of the IP strategy defined in Task 1.4 (Innovation tracking and data management) with the overall innovation and exploitation objectives.
 - Map potential IP assets generated in the project.
 - Identify and safeguard the key IP assets generated during the project lifetime through the submission of the appropriate patent applications.
 - Conduct a Freedom to Operate (FTO) analysis where commercialisation is planned.
 - Define flexible licensing models adapted to stakeholder types (e.g. open-source for research; commercial licenses for industry; hybrid models where appropriate).
3. **Clarity and Alignment of Licensing Terms:** Simplify IP usage for stakeholders to minimise barriers to adoption.
 - Develop visual, easily understandable licensing model diagrams for internal and external alignment.
 - Validate licensing models with selected stakeholders and early adopters to ensure fit for purpose.

The **exploitation report** resulting from this activity will also include recommendations for the next steps toward full commercialisation following the end of the project.

5.3 Business Plan

Building on market intelligence and exploitation documentation, a generic project-related business plan will be developed based on the following activities:

1. **SWOT Analysis:** Conduct a structured Strengths, Weaknesses, Opportunities, and Threats (SWOT) analysis based on feedback from both internal project teams and external stakeholders.
 - Identify key strengths, weaknesses, opportunities, and threats from a business viability perspective.
 - Prioritise findings based on relevance to market entry success.

2. **Market Analysis:** Focus on identifying market drivers and barriers, rather than solely estimating market size.
 - Analyze growth factors, inhibitors, and trends such as technology adoption rates.
 - Explore emerging niches with early adoption potential.
3. **Financial Projections:** Apply range-based forecasting to create optimistic, realistic and pessimistic financial scenarios.
 - Model potential revenue streams, operating costs, and investment needs across the defined scenarios.
 - Consider the cost of scaling up and supporting deployment beyond initial pilots.
4. **Marketing Strategy:** Initially target early adopters before scaling wider.
 - Define “beachhead markets” where CoEvolution adoption is likely to occur most rapidly.
 - Plan pilot projects and demonstrators to showcase business value in practical, real-world contexts.
5. **Value Chain Definition:** Map the broader ecosystem surrounding the CoEvolution framework.
 - Identify upstream enablers and downstream users that are critical to the framework’s success.
 - Use Value Chain Analysis tools to determine where value is created, captured, or lost.
6. **Business Models:** Tailor business models to each exploitable result.
 - Develop Business Model Canvas templates for each key output (e.g., Software as a Service (SaaS) offering, integration module, consultancy service).
 - Adapt commercialisation routes based on the nature of each output.

The business plan will serve as a blueprint for post-project sustainability, investment readiness, and industry engagement.

5.4 Exploitation Summary

Section 5 outlines the structured activities designed to support the long-term sustainability and exploitation of CoEvolution’s results. Although the activities is scheduled to begin in M8, this strategic plan establishes the foundation for market validation, exploitation design, and business planning. These activities will build upon the outcomes of Task 3.2, ensuring alignment between technological outcomes and industrial needs. The work will culminate in an integrated exploitation pathway aimed at maximising CoEvolution’s impact within its target markets. A summary of key planned activities is shown in Table 9 below. These activities will be tailored to the evolving needs of the project at the time of execution.

Table 9: CoEvolution Key planned activities

Activity	Approach	Practical Actions
Multi-stakeholder Market Analysis	Market-Back Analysis	Scenario planning, stakeholder interviews, cross-sector expertise gathering
Assessment of Operational Costs	Total Cost of Ownership Modeling	TCO modeling, benchmarking against alternatives
Validation of Business Relevance	Real-World Use Case Testing	Scenario simulations, real user validation, feature prioritisation
Documentation of Exploitation Activities	Continuous Monitoring	Collection and analysis of partner activities
Licensing Strategy Development	IP Strategy Aligned with Exploitation	IP mapping, FTO analysis, licensing model definition
Clarity and Alignment of Licensing Terms	Simplified Licensing Communication	Visual licensing models, stakeholder validation
SWOT Analysis	Stakeholder-Driven SWOT	Internal and external feedback, prioritisation
Market Analysis	Focus on Drivers and Trends	Driver/barrier identification, niche exploration
Financial Projections	Range-Based Forecasting	Multi-scenario financial modeling
Marketing Strategy	Early Adopter Targeting	Beachhead market definition, pilot project planning
Value Chain Definition	Ecosystem Mapping	Partner role identification, value chain analysis
Business Model Development	Business Model Canvas	Canvas creation per exploitable output, business model tailoring

6 Conclusions

This deliverable outlines the strategic framework that will guide the communication, dissemination, and exploitation activities of the CoEvolution project. It brings together the vision, objectives, roadmap, roles, and responsibilities necessary for impactful outreach and long-term sustainability of the project results. The document functions both as an internal reference for consortium members and as a shared foundation for coordinated dissemination and exploitation efforts across the project's lifecycle.

By detailing a variety of targeted tools and channels, the deliverable supports proactive engagement with relevant stakeholders, spanning academia, industry, policymakers, and the broader public. It highlights a well-equipped dissemination and communication toolkit, defines key actions and audiences, and provides a timeline of planned activities. Furthermore, a robust monitoring framework based on KPIs enables the project team to continuously assess and refine its strategy to ensure maximum visibility and uptake of results.

The exploitation section outlines the initial approach for valorising the project outcomes, including considerations for sustainability, IP management, and engagement with potential adopters. As CoEvolution advances, this strategy will evolve in alignment with emerging opportunities, stakeholder needs, and the project's own trajectory.

Looking ahead, the consortium will continue working closely to implement the outlined strategy, reinforcing cross-partner collaboration and actively engaging with the wider community. The communication and dissemination efforts will be regularly updated and enhanced to ensure their relevance and effectiveness, always aligned with the project's overarching goals and KPIs.
